

Specify: Other?

- [Disable Automatic FK Index Creation](#)
- [Cross-Tab](#)
- [Packages](#)
- [Collate PT-BR](#)
- [derived tables, joins in Update clause](#)
- [live replication support](#)
- [Please, please, please bundle standard functions in the database and don't make us jump through hoops to use them.](#)
- [Better/easier handling of blobs, i.e. blob filters inside SP, both streamed and segmented blobs passed to/from UDF, using collation with CONTAINING ap](#)
- [Backup tool to work per table](#)
- [Enhanced backup speed after extensive insert/delete activity](#)
- [CE Platform](#)
- [Improved SQL2003 Compliance](#)
- [Field type Logic](#)
- [Embedded JVM for Java SP and Triggers](#)
- [Remote halting runaway select statements](#)
- [Decent multilanguage support](#)
- [improvement of data integrity in case of unexpected shutdown](#)
- [Object's names greater than 31 chars.](#)
- [Native Replication](#)
- [before-commit trigger](#)
- [select from select](#)
- [Automatic stored procedures recompiling](#)
- [Be able to identify which users are currently connected to a database / server by ComputerName/UserName/IP Address](#)
- [Backup partially only for certain tables](#)
- [Good cross-platform support for embedding](#)
- [Improved query planning](#)
- [more characters for table and column name](#)
- [Increase length of object names](#)
- [Transaction tracing \(being able to perform user-defined actions on start/end of a transaction or on connect/disconnect from DB\)](#)
- [Temporal Tables](#)
- [API/Query for available database aliases](#)
- [fix bugs](#)
- [better support for crash / computer reset / computer power down](#)
- [Boolean native type](#)
- [ORDER BY using field name alias \(ex.: select name as Client_Name from Client ORDER BY Client_Name\)](#)
- [1: Ability to import bad backups. 2: Embedded version on OS X](#)
- [schema support](#)
- [Kill queries easily](#)
- [Replication/Mirroring](#)
- [Temporary tables](#)
- [Collate for Portuguese \(Portugal and Brazil\)](#)
- [More Default UDFs](#)
- [Timed SP's. SP's that go off on intervals from the server. Usefull for automation without external app residing on server](#)
- [Easier access of external files](#)
- [GUID](#)
- [Improved Performance - Integrate Vulcan Changes into Engine](#)
- [Integration of most important functions in the engine](#)
- [Exception messages with variables](#)
- [Thread safety](#)
- [procedures and triggers using domains](#)
- [Creating internal functions \(language extension\)](#)
- [string functions and other useful built-ins](#)
- [more internal functions](#)
- [indexing of text blobs for efficient searches](#)
- [Clustered Index \(point 3?\)](#)
- [Derived Tables, dirty read in read-only triggers](#)
- [distributes tables in diferents disk](#)
- [support for index table](#)
- [Temp tables](#)
- [Temporary Tables](#)
- [Incremental Backup/Restore](#)
- [domains as sp param type](#)

- [Temporary Tables](#)
- [Allow users to change their own passwords. This should be combined with optional checks to make sure that passwords are not reused within certain peri](#)
- [Support for longer field naming, particularly in stored procs \(ie. 50 char long\)](#)
- [storage procedure and udf write in java](#)
- [not one file databases](#)
- [Log Transaction equals Sybase ASA](#)
- [Performance for Complex Queryes \(Joins\)](#)
- [data pump utility](#)
- [Rename Tables](#)
- [graphic tools](#)
- [Select in From Clauses EX: select country_name, city_name from country, \(select id, name from cities\)](#)
- [compactation of data in tx/rx](#)
- [Definir contas de usuários por BD e não por Server.](#)
- [Incrementatl Backup](#)
- [subQuery in from clause select](#)
- [OLAP extensions like MSSQL](#)
- [InterBase compatibility](#)
- [distinct tables by owner](#)
- [kind of field boolean](#)
- [Increase of Speed, mainly in stored procedures processing](#)
- [easy replication](#)
- [more build in functions](#)
- [transaction log or incremental backup](#)
- [Implementations of EXECUTE STATEMENT is normal PSQL, not as a hack!](#)
- [More character sets / collations \(ie ISO-8859-15\)](#)
- [md5 instead of password](#)
- [Zebedee like secure tunneling ability build-in for DB access over internet](#)
- [rowid for get de rowid about record](#)
- [COM server for embedded version in win32 paltform \(for ease of use with languages other than C/Delphi\)](#)
- [wildcard events](#)
- [clinet behind a proxy tunnel](#)
- [Use of field aliases in Where and order by clauses](#)
- [SUB-SELECT'S IN FROM](#)
- [Increase security to FB for Windows](#)

[Go Back](#)
